Eligibility

There are several admission conditions:

• Holding a first year of a Master course in the fields of Economy, management, public health or science of society (national or equivalent) + professional experience (two years minimum) in a field close to the interests of the Master (in Europe or countries targeted by the Master).

• Holding a PhD in medicine (or pharmacy) national or equivalent + two years professional experience in public health in the countries targeted by the Master or in Europe.

• Holding a degree from a top engineering, scientific, business or economic school or IEP + professional experience in a field close to the interests of the Master.

• Obtaining official recognition of acquired professional experience (VAPP): 3 years minimum professional experience in public health, in the countries targeted by the Master or in Europe.

The candidates will be selected after:

• a preselection screened from application files and a written exam;

• an in-depth interview with a jury.

Educational methods

The Master course comprises four main original, cutting edge educational phases; called « blended training ».

1. An initial four week intensive gathering the students on the Public Health campus of Public (IRSP). This institute is supported by the OMS and is situated at Ouidah, Benin. This session includes 165 hours of lectures, workshops, case studies and field investigation.

2. Distance learning completes classes and includes self-assessment exercises and rated work. The EAD extends over the 8 months following the course.

3. Tutoring on the work site or during the internship of the students comprises three supervisions spread over 9 months and carried out by teams of supervisors.

4. An operational research memoir defended at the end of the cursus before a jury consisting of teachers from the Master and international experts recommended according to their skills.

5. The viva voce is also held at Ouidah.
La formation a lieu en Afrique : Côte d'Ivoire, Sénégal, Togo et certains pays d'Afrique francophone.

Les professions concernées sont : chefs de service, directeurs de santé, chefs de districts sanitaires, ainsi que des personnels d'entreprises de gestion publique.

La formation vise à développer les compétences techniques et managériales dans le domaine de la santé publique.

Les objectifs de la formation sont d'améliorer les programmes de vaccination et de renforcer les capacités des professionnels de la santé publique.

La formation se déroule en trois phases :
1. La phase théorique, dispensée à Paris-Dauphine.
2. La phase pratique, dispensée en Côte d'Ivoire.
3. La phase de mémoire, dispensée à Paris-Dauphine.

Le programme de formation comprend 12 unités d'étude, dont 5 sont en nature mixte : public-publique.
